SUMMARY

Computer Science student at IIIT Sri City with hands-on experience in backend development, clean API design, and AI-integrated systems. Demonstrated impact through a Syrotech Hackathon 2025 win — an AI-powered education platform built to compete against 150+ teams. Focused on writing purposeful, scalable code that solves real problems.

EDUCATION

Indian Institute of Information Technology, Sri City

Andhra Pradesh, India

Bachelor of Technology – B.Tech, Computer Science (CGPA: 9.3/10)

Aug 2024 – Jul 2028

Core CS: Data Structures & Algorithms, OOP, Probability & Statistics, DBMS, Operating Systems, Computer Networks

TECHNICAL SKILLS

- **Languages:** C++, TypeScript, JavaScript, Python, Java, SQL
- **Backend:** Node.js, NestJS, REST APIs, PostgreSQL, MySQL, Supabase
- **AI/ML:** PyTorch, MNE, Numpy, Pandas, EEGNet, OpenAI API, NLP, LangChain
- **Tools & Platforms:** Git, Docker, Streamlit, Postman, Jira

EXPERIENCE & COMMUNITY INVOLVEMENT

Teaching Assistant

Jan 2026 – May 2026

IIIT Sri City

- Supported Data Structures & Algorithms lab by mentoring students on complexity analysis, graph traversal, and dynamic programming.
- Assisted Signals & Systems lab, helping students bridge theoretical concepts with structured, optimized implementations.

Web & Tech Core Member

Oct 2025 – Apr 2026

TEDx Sri City

- Supported TEDx event infrastructure and digital presence as part of the Web & Tech vertical.

NLP Domain Member

Aug 2025 – Apr 2026

Epoch – AI/ML Club, IIIT Sri City

- Collaborated on NLP projects and contributed to technical events and knowledge-sharing sessions at Epoch.

PROJECTS

Restaurant Reservation & Capacity Management Platform | NestJS, TypeScript, JavaScript, HTML, CSS

- Developing a full-stack platform with live table availability tracking and automated reservation lifecycle management.
- Designed role-based dashboards for customers, staff, and administrators with distinct, purpose-built workflows.

EEG-Based Cognitive Stress and Motor Imagery Classification (BCI) | Python, MNE, EEGNet, ShallowConvNet, PyTorch

- Building a Brain-Computer Interface to detect cognitive stress from EEG signals (SAM40) and classify four motor imagery classes (BCI Competition IV Dataset 2a) with subject-independent evaluation.
- Developed an end-to-end pipeline covering preprocessing, artifact removal, feature extraction, and cross-subject model generalization using EEGNet and ShallowConvNet.

IntelliGrader – AI-Powered Smart Education System | OpenAI API, NLP, Streamlit, PostgreSQL, YouTube API

- Built an LLM-powered platform for automated PDF summarization, chatbot-based doubt resolution, AI-driven answer evaluation, and personalized YouTube learning recommendations. **Won Syrotech Hackathon 2025.**
- Designed a scalable PostgreSQL (Supabase) backend with an intuitive Streamlit interface, developed collaboratively in a team.
